

01 / THE ANSWER

Build the house every 40 days.

The winner is not one platform. It is a controlled compounding rhythm.

DESIRE

Instagram + TikTok

Instagram makes the world desirable. TikTok makes it move. Both lead to one product truth.

BELIEF

Creators + founder YouTube

Governed UGC supplies social trust. Founder-led media explains the garment, price and decisions.

INTENT

Google + Pinterest + Shop

Quiet discovery surfaces capture what social attention would otherwise leak.

CLOSE

Shopify + CRM

Fast PDPs, fit proof, checkout, email, SMS and post-purchase turn attention into retained demand.

| Plan capacity to 50% growth. Authorize the next buy only at the 45% floor after 85%

C\$100K

AUGUST 2027 RECONCILED NET SALES

85%

SOLD THROUGH INSIDE 30 DAYS

45–50%

GROWTH BETWEEN ELIGIBLE RELEASES

C\$3K

MONTHLY FOUNDER-PAY CASH ENVELOPE

02 / OUTCOME CONTRACT

The destination
does not move.

The plan bends. The founder target stays fixed.

03 / AMBITION WITH CONTROL

Dream big. Bet in waves.

Ambition chooses the mountain. Evidence chooses the next foothold.

The engine does not lower the goal because receipts are missing. It converts missing receipts into a specific research or proof action. The first buy learns. The second release tests repeatability. Each later release earns a larger position.

That is the hedge-fund translation done correctly: information changes bet size; owner capital never masquerades as demand; a losing signal can shrink the position.

04 / THE BACKSOLVE

Eight releases. One August window.

A 10-week cadence reaches cumulative milestones but arrives too slowly for the new calendar-month goal.

Forty days sits inside the founder's month-to-month-and-a-half rhythm. It places Release 8 on August 15. A front-loaded sales curve recognizes most of the August release inside the calendar month while a final slice of the July release contributes early-August revenue.

CONTROL The date is a capacity plan. A missed sample, QC, demand or fulfilment gate delays the release rather than creating fake stock or compressed quality.

05 / SALES CURVE

Make the first 14 days matter.

The August target depends on launch velocity, not only 30-day totals.

The planning curve assigns 77% of 30-day net sales to the first two weeks, 13% to week three and 10% to the final nine days. It is a target shape, not a VORG observation.

Drop 001 must record daily net units, stockouts, cancellations, refunds, size waitlists and channel source. That real product-age curve replaces this planning shape before the engine is trusted at scale.

C\$112,387

MODELED AUGUST NET SALES

989

APPROX. AUGUST NET ORDERS

1,698

RELEASE 8 INVENTORY UNITS

06 / 45% FLOOR

The floor clears the month.

At 85% sell-through and 40-day cadence, the lower approved growth track reaches about C\$112k in August.

RELEASE	DATE	UNITS	30-DAY NET SALES
01	08 Nov	126	C\$9,738
02	18 Dec	183	C\$14,144
03	27 Jan	265	C\$20,482

C\$142,331

MODELED AUGUST NET SALES

1,253

APPROX. AUGUST NET ORDERS

2,153

RELEASE 8 INVENTORY UNITS

07 / 50% TARGET

The target creates the buffer.

Plan teams, creative and supply to 50%. Release purchase orders only when the 45% floor is earned.

The 50% path is not a promise to order 2,153 units. It is the capacity envelope the business must be able to support if receipts keep clearing. Its extra C\$42k above the goal absorbs a slower August curve, channel variance or weaker product mix.

AUTHORITY

The lower bound of the demand interval—not the headline point forecast—must cover the proposed buy.

JUL 06

Release 7

audience growth · stock/size proof · August waitlist

+

AUG 15

Release 8

front-loaded 17 calendar days

08 / AUGUST COMPOSITION

July creates the runway. August collects it.

The C\$100k month is not a single-day miracle.

July freezes the August demand range, creative matrix, source-deduped channel order ledger, cash waterfall, supplier capacity and fulfilment plan. The August purchase order is not placed because the calendar says so; it becomes eligible because July proves it.

Launch-day screenshots are not the end. Returns, customer service and September working capital remain on the August scorecard.

ROUTE A

Cash-gated

Pay C\$3k only after the next PO, protected cash and floor survive. Deferred months remain recorded.

ROUTE B / RECOMMENDED IF PAY IS FIXED

Protected bridge

C\$11,465 for the 45% floor or C\$12,258 for the 50% target.

Pay the founder.
Protect the engine.

Separate personal liquidity from inventory liquidity.

10 / CASH WATERFALL

Every dollar has an order.

Profit on paper is not free cash.

DIVIDEND LOCK No cash dividend before month 12. Month 12 still does not create an automatic dividend: tax, payables, returns, next PO, accountant review and director solvency control.

TAX CONTINGENCY The model protects 15% of positive operating contribution as a planning reserve. It is not a calculated liability.

11 / WORKING UNIT ECONOMICS

Five pieces. One economic truth.

Vendor quotes and approved samples will replace every working cost.

PRODUCT	ROLE
Firm Jacket	Hero
Women's low-rise denim	Core
Men's denim	Core
Scarf	Entry
Top / bodysuit	Seasonal

UNITS	PRICE	LANDED COGS
12	C\$249	C\$85
24	C\$128	C\$38
20	C\$128	C\$38

12 / ASSORTMENT ARCHITECTURE

Restock the proof.
Add newness with taste.

Growth does not mean multiplying every SKU evenly.

65–75% proven hero/core replenishment by SKU-size velocity.

SELL

Settled unit velocity

Daily net units by product age, SKU and size.

LOSE

Lost-demand proxy

Out-of-stock PDP views, cart failures and size waitlists.

RETURN

Fit truth

Too small, too big, quality, expectation and remorse reasons.

BUY

Risk-adjusted quantity

Margin, salvage, stockout cost, demand range and cash-at-risk.

13 / REPLENISHMENT LOGIC

A sellout can
hide lost demand.

Stockouts censor the evidence. Dead sizes trap cash.

The next order uses a downside-risk newsvendor decision. “Sold out” is not automatically good: an early stockout can mean the

NOW

Nowcast + scenarios

Public signals, macro, supply, search and bottom-up order capacity.

EARLY

Bayes + hazard + newsvendor

Small-data updating, time-to-sell and quantity decisions.

GROW

Bandits + ensembles

Controlled exploration and reconciled SKU/drop/month forecasts.

LATER

Causal lift + MMM

Incrementality and portfolio budgets after powered history.

Eleven engines.
One maturity ladder.

Borrow the best ideas from markets, forecasting and causal science—only when VORG data can support them.

15 / HEDGE-FUND TRANSLATION

Information changes position size.

The fund mindset is useful when it governs risk—not when it imitates expensive data theatre.

VORG's own Shopify cohort becomes the highest-coverage transaction panel for its business. Manual pop-up counts replace inaccessible foot-traffic panels. Supplier turnaround, MOQ flexibility and production answers become channel checks. Paid hedge-fund data, satellite imagery and unauthorized scraping remain out.

16 / BAYESIAN SMALL-DATA LAYER

Start wide.
Earn precision.

A posterior is an updated belief—not certainty wearing a formula.

After the first 30 settled orders, update conversion, return and size-rate distributions. After two drops and 100+ orders, pool related products/sizes hierarchically while preserving real differences. Never let one viral post collapse the interval.

Forecast when,
not only how much.

The founder target is explicitly a 20-day outcome

Quantity is a risk decision.

Expected revenue is not enough. Cash ruin and leftover risk matter.

The newsvendor layer chooses the demand quantile using unit contribution, leftover salvage and stockout cost. A downside-risk cap protects the C\$1,500 floor. Fractional-Kelly logic then sizes only part of the estimated edge because fashion probabilities are noisy.

RULE No full-Kelly inventory or ad bet. The C\$5k–C\$6k first-production ceiling wins over a score.

80–90%
Exploit qualified winners

10–20%
Explore new creator/creative cells

19 / CONSTRAINED BANDIT

Explore without burning the drop.

Thompson sampling belongs after enough attributable orders—not before launch.

At 300+ attributable orders with stable tracking, the engine can sample among qualified creative/creator cells. Reward equals retained incremental contribution, not clicks or platform ROAS. Brand, legal, frequency and total-spend constraints stay hard.

20 / CAUSAL + MMM

Attribution is a claim.
Lift is a test.

Each platform can claim the same customer. The engine refuses to add them.

Bayesian structural time-series or geo/holdout tests activate only when a credible control and enough statistical power exist. Google Meridian-style MMM waits for 52+ weekly observations with meaningful channel/spend variation. Prelaunch MMM is blocked.

STAGE	TRIGGER	ACTIVE LAYER
0	No sales	Nowcast · scenarios · bottom-up capacity
1	30+ settled orders + full curve	Bayes · hazard baseline · return reasons
2	2 drops + 100+ orders	Hierarchical pooling · newsvendor · cohorts
3	300+ attributable orders	Constrained bandit · interval calibration
4	Credible control	Causal lift
5	52+ varied weeks	MMM · reconciled ensemble

21 / ACTIVATION LADDER

The model grows
with the company.

Sophistication is earned by receipts.

The current truth is Stage 0. The deck shows later engines so the data is collected correctly now—not to pretend they are already calibrated.

22 / EVIDENCE LADDER

A like is not
a purchase.

Budget authority rises only with evidence quality.

Owner cash, gifted units, collected tax and platform-attributed duplicates never raise sell-through or revenue. Cancelled/refunded orders reverse. A goal allocation never gets relabeled as a forecast.

23 / CHANNEL PORTFOLIO

Nine acquisition owners. Zero double counting.

The 50% target path assigns 1,253 August orders as coverage jobs—not forecasts.

No borrowed or paid platform should own more than 25% of acquisition by August. One order receives one acquisition source; views, assists and retargeting touches live in separate columns.

REELS

Discovery

Trial Reels where available; non-follower reach plus qualified downstream intent.

CAROUSELS

Consideration

Fit, movement, details, founder reasoning, price/size/shipping truth.

STORIES

Control room

Polls, questions, countdown, stock-by-size, customer receipts and service.

DM

Research + close

Tagged objections, size/price intent and service—never spam.

Instagram becomes
a first-class engine.

Not a TikTok repost folder. Not an aesthetic scrapbook.

Organic Instagram owns 12% of the August acquisition job: Meta paid owns a separate 14%. The same creative may feed both.

THE PIECE

silhouette · motion · styling

THE DECISION

fabric · cut · price · tradeoff

THE CITY

THE ORIGINAL

Discovery meets search intent.

TikTok keeps its speed, but gains commerce discipline.

Organic is the rapid-format lab. Search is a separate keyword/query lane. Shop/LIVE becomes a marketplace decision with a channel-specific catalog, fees, returns, inventory reservation and price. Commercial music and branded-content disclosure receive a pre-publish check.

SERIES 01

Building The Firm

Weekly operating truth.

SERIES 02

Why This Piece Exists

Fabric, cut, price and choice.

SERIES 03

The Sample Table

Failures, revisions and proof.

SERIES 04

City Proof / Debrief

People, pop-up, receipts and next move.

27 / FOUNDER YOUTUBE

Depth compounds
after the feed moves on.

Founder media should make price and product understandable—not apologize for either.

28 / CREATOR PORTFOLIO

Build a network. Not a gifting pile.

Creators are creative partners, trust brokers and measurable acquisition cells.

Every relationship logs selection logic, audience/market hypothesis, gift/payment, disclosure, deliverables, rights/whitelisting, music, link/code, units, content, settled orders, returns and customer quality. No scripted praise. No undisclosed gifts. No follower-count revenue forecast.

Make every product machine-readable.

Free listings can reach Search, Images, Lens, YouTube, Shopping and other eligible surfaces.

Launch the technical store/feed truth early enough to fix errors. Reconcile product/variant URLs, title, type, size/gender, imagery, price, availability, shipping and returns. Free listings precede paid Shopping; visibility is never guaranteed.

Google Trends remains relative direction: save the query, term/topic choice, geo, period, category and CSV.

PINTEREST

Visual intent

Catalog, vertical product/styling/detail assets, boards built from customer language and exact PDP paths.

SHOP

Product discovery

Accurate titles, descriptions, imagery, price, shipping markets, shoppable posts and post-purchase follow-up.

Quiet channels
keep working.

Evergreen visual search and conversational product discovery diversify

31 / EMAIL + SMS

Attention becomes an owned asset.

The first flows matter more than sending constant newsletters.

Email and SMS consent stay separate and provable. Canada-facing commercial messages require CASL consent, identification and unsubscribe. U.S. SMS needs vendor/legal review. A referral page captures the referred person's own consent instead of auto-messaging uploaded contacts.

LANE	JOB	GATE
Facebook Reels	Cheap approved-video reuse	No dedicated production before customer quality
Threads	Founder POV / conversation	No quota before tagged orders
Reddit	Manual listening / transparent participation	No automation or disguised promotion
Snapchat	Audience-specific reuse	First-party age/market evidence
Discord / WhatsApp	Requested utility / community	Real demand + moderation
PR / stylists	Earned proof / pulls	Track inventory, rights, placement and orders
Marketplaces	Selective reach	DTC margin, tax, returns and brand control

32 / THE MISSED CHANNELS

Test the edges.
Protect the core.

Not every channel deserves production or a sales quota on day one.

33 / ONE-SHOOT MULTIPLICATION

One production day. A month of proof.

Every shoot has an asset contract before the camera turns on.

Required outputs: clean front/back/detail/movement; fit/model measurements; founder explanation; native vertical hooks; a long-form episode; carousels/Stories; catalog/search crops; email/post-purchase modules; rights-cleared paid variants; VORGEAVY archive.

VHS and direct flash texture are accents. Clean garment evidence remains mandatory.

34 / WEEKLY OPERATING RHYTHM

Research Monday. Receipt Friday.

The content system is a decision loop, not a posting calendar.

Friday ends in one dated decision: scale, hold, revise or kill. Paid distribution remains founder-controlled. A view spike cannot win if PDP intent or retained contribution deteriorates.

35 / RELEASE STORY ARC

A drop is a story.
Not a date.

Each 40-day cycle has a narrative and an operating job.

Scarcity comes from honest capacity. No fake countdown, fake queue, fake customer or hidden delivery condition. Sold-out pages capture size/restock demand and preserve the archive.

SEE

Decisive visual proof

Front, back, detail, movement, styling.

FIT

Measurements + comparison

Model and garment facts; later fit learning.

TRUST

Material + construction

Care, claim, sample and quality truth.

BUY

Price + delivery

USD/CAD, duties/tax, shipping, returns, checkout.

The PDP must sell
as hard as the film.

Content creates a promise. The product page resolves every buying objection.

37 / MEASUREMENT HIERARCHY

Loud is not
the same as growing.

Metrics move from attention to retained economics.

The operating dashboard can show all layers, but purchase orders and scale budgets respond to the lower layers. Platform ROAS remains a diagnostic claim until reconciled with Shopify transactions and, later, causal tests.

Count the customer once.

Separate acquisition, assistance and discovery.

Use transaction ID, UTM/code, customer identity rules and a post-purchase “How did you first hear about us?” answer. Keep first-touch, last-touch and assisted rows. Never sum every platform’s purchase column.

When powered, holdouts estimate what would have happened without the channel.

COHORT QUESTION	RECEIPT
Who came back?	First-to-second purchase rate and time
Who spent more?	Cumulative net AOV / contribution
Who returned?	SKU-size-reason by creator/channel
Who referred?	Referral lineage and retained order
Who went direct?	Direct/brand/owned share by release

39 / COHORT + RETURNS

The second purchase is the hidden winner.

A channel that buys one high-return order can be worse than a smaller high-quality cohort.

Shopify cohort reporting becomes the in-house transaction panel. The engine ranks channels and creators by retained customer quality, not only first-order CAC.

CANADA

GST/HST exports

Qualifying exports can be zero-rated when conditions and evidence are met.

PAYROLL

Founder salary

Payroll deductions/remittances and T4 treatment need setup.

DIVIDEND

Year-end only

T5/classification and lawful distributable surplus require accountant review.

U.S.

State + federal

Nexus, physical events, inventory/3PL and trade/business exposure require advice.

40 / TAX + PAYROLL

Tax cash is
not growth cash.

Protect the business by naming every tax question early.

The model's 15% income-tax contingency is a protected planning reserve, not a tax calculation. It does not settle corporate tax.

DOOR A

Canada → U.S. DDP

Carrier/broker duty, delivery promise, return path and export evidence.

DOOR B

U.S. 3PL

Importer, inventory nexus, pick/pack, storage, return and cash timing.

USD revenue needs USD contribution truth.

Brooklyn demand is irrelevant if duties, returns and fulfilment erase the

42 / SUPPLIER CADENCE

Forty days requires
a faster supply truth.

A marketing calendar cannot outrun sample, QC and inbound reality.

Negotiate reorder lead time, material reservation, split-wave MOQ, QC slot, shipping method and failure remedy before growth.
The first PO cap remains C\$5k–C\$6k. A factory “yes” is not proof; quote, sample, measurement, test and shipment artifact control.

FOUNDER

Taste + product + camera

Final brand, product, budget and PO authority.

OPS

Inventory + supplier + fulfilment

First contractor/hire trigger when weekly WIP breaks.

GROWTH

Creative ops + measurement

Asset matrix, creators, feeds, source ledger, Friday decision.

SERVICE

Fit + returns + community

Fast answer, reason capture and customer-content consent.

The first bottleneck
may be the founder.

Eight releases plus content, service, supply and finance need explicit ownership.

FAILURE	EARLY SIGNAL	DESIGNED FIX
Traffic, no orders	Reach ↑ / PDP flat	Buyer/problem/creative/PDP continuity
Orders, no contribution	Returns/fees erase ROAS	Fix fit/price/ship/fee; stop scale
Inventory outruns demand	Audience capacity flat	Hold PO; build source order coverage
Salary starves PO	Cash below commitment	Gate or bridge
Creative fatigue	Marginal CAC deteriorates	New cells / creator rotation
Platform shock	>25% dependency	Owned/search/direct diversification
Supplier slip	Lead time > cadence	Split wave / reserve / delay
Forecast vanity	Inputs edited after result	Freeze/version/publish error

44 / FAILURE MODES

The engine knows
how it can break.

Every failure has an early signal and a designed response.

One screen. Five truths.

The cockpit should make the next constraint obvious.

Daily at launch: net units/net sales by SKU-size, stockouts, checkout exceptions, refunds, contribution and available cash.
Weekly: new/returning quality, marginal CAC, creative/creator decisions, direct/owned/search share, supplier/PO state, salary/tax cash and forecast error.

01 Confirm what the C\$3k salary means and choose cash gate vs bridge.

02 Replace COGS with quotes; choose Door A/B; build USD contribution.

03 Build Shopify/GA4/feed/consent/source data contract.

04 Run identical Brooklyn/Chicago/LA/Atlanta product-size-price research.

05 Lock creator rights/disclosure/music contract.

06 Lock four creative franchises and one-shoot asset contract.

01 Approve PP samples and size curves—or delay.

02 Soft technical Shopify/Google/Shop/Pinterest launch with truthful inventory states.

03 Build product/size/market waitlist and post-purchase survey.

04 Produce first full product-proof shoot and founder episode.

05 Secure 40-day supplier reorder/material/QC capacity.

06 Build accountant, tax, broker and state-nexus tracker.

01 Freeze Drop 001 demand range and cash waterfall.

02 Run controlled creative/landing tests with founder-set caps.

03 Confirm U.S. fulfilment, returns, duties and customer-facing truth.

04 Confirm service, packaging, inventory and incident plan.

05 Launch only after sample, production, inbound, QC, demand and market-entry gates clear.

06 Publish the day-30 error and update one assumption at a time.

BRAND / CASE	OBSERVED MECHANISM	VORG TRANSLATION
Scuffers	Rapid drops, daily data, direct traffic, online proof before retail	40-day rhythm + daily dashboard + pop-up after digital proof
Chubbies	Lifestyle world, owned list, customer content	The Firm franchises + customer-content loop
Represent	Founder/product ladder	Founder YouTube + product truth
Corteiz	Participatory city energy	Permitted, controlled, real proof
Telfar	Time-boxed preorder	Transparent demand capture / split-wave option
Hermès / Jacquemus / Nude / Jaded / EME	Craft, world, community, hero, drop event	Selective synthesis; no scale imitation

49 / STUDY PEERS

Borrow mechanisms. Never borrow receipts.

External growth makes a tactic testable—not a VORG forecast.

Shopify reports Scuffers at 225% year-over-year and Chubbies at 50% in their respective cases. Those numbers demonstrate that fast product/data and community/world mechanisms can coexist with growth; they are not used as v3 forecast rates.

50 / CANADA QUEUE

Expand from proof.
Not from convenience.

U.S. is primary. Canada remains a sequenced second engine.

Every market enters through the same algorithm: search/demand signal → product/size/price intent → settled contribution → permitted physical proof. Ottawa is not the launch focus. Canada-specific tax, language, shipping and creator consent remain explicit.

Primary channel evidence.

Checked 22 August 2026. Platform claims remain mechanism evidence.

54 / FINAL DECISION

Make the goal eligible.

The engine can draw the road. The receipts decide how fast VORG travels it.

One coherent fashion house compounds every 40 days. Instagram makes the world desirable. TikTok and creators make it move. YouTube makes it believable. Google, Pinterest and Shop make it findable. Shopify makes it buyable. Email, SMS, product quality and post-purchase make it repeat. Finance protects inventory, founder pay and tax cash. Prediction sizes the next bet from receipts.
